CallHero Hackathon — Challenge, Tools & Submission

⋮

Unknown user • Sep 22 (Edited Yesterday)

100 points | Due 2:00 PM

The Monday Morning Screen — Call Hero Hackathon

It's 8:00 am on Monday. Harbourside Dental closed at 5 pm Friday — nobody was there all weekend, but the phone kept ringing. 31 calls came in, and Jade (our AI receptionist) answered every one. The practice owner walks in, coffee in hand. Her first patient arrives at 8:30. She has ninety seconds.

Your challenge

Design and build the screen she sees. One screen, ninety seconds — what does she need to know, and what does she need to do about it? That's the whole brief.

APPROVED TOOLS & SETUP

You do NOT need to be a hardcore coder — pick whichever tools suit your team's idea. All tools below are free for the day if you follow the steps.

VOICE AI (pick one)

Vapi: Go to vapi.ai → Sign up (Google or email). No credit card needed — new accounts get \$10 free credit automatically. Create an assistant from the dashboard, pick a voice + LLM. Test in-browser first (free), then connect a phone number via Twilio once ready

\$10 ≈ ~1 hour of call time — don't leave test calls running

Retell AI (alternative)Go to retellai.com → Sign up. \$ 10 free credit, no card required to start. Build agent → test via web call before connecting telephony

Same budget warning as Vapi

TELEPHONY

Twilio: Go to twilio.com/try-twilio → Sign up, no credit card required. Verify your email + your own phone number (required before you can call/text anything). Claim your \$15 free credit and get a free trial phone number from the console

Trial accounts can only call/text VERIFIED numbers — verify your own number to test calls to your phone

BACKEND / DATABASE (pick one)

Supabase: Go to supabase.com → Sign up with GitHub (no credit card). Create a new project, set a database password, pick a region. Free tier: 500MB DB, 50k monthly users — plenty for a hackathon prototype

Firestore (alternative): Go to firebase.google.com → Sign in with a Google account. Create a new project → select Spark plan (free, no card). Enable Firestore/Auth as needed

CLOUD / HOSTING

Your workAssigned

Mark as done

👤 Private comments

📄 Add comment to Unknown user

Vercel: Go to vercel.com → Sign up with GitHub (no credit card). Import your repo (or start from a template) → Deploy.
Stays on Hobby plan by default — free forever, cannot be billed even by mistake

 AUTOMATION / NO-CODE

Make: Go to make.com → Sign up (no credit card). Free plan includes 1,000 operations/month Use the visual scenario builder to connect your voice AI tool, database, and any webhooks

 Today's schedule

- 9:30–10:00 am – Registration
- 10:15–10:30 am – Challenge briefing
- 10:30–11:00 am – Google Classroom setup
- 11:00 am–2:00 pm – Build time
- 2:00–2:45 pm – Lunch + networking + interviews
- 2:45–3:30 pm – Live presentations
- 3:30–3:50 pm – Top 3 winners announced
-  What to submit — due 2:00 pm

One submission per team, uploaded here on Google Classroom:

- A recording of your presentation
- A link to your screen, your Figma prototype, or your files
- Three or four sentences on what you built and what you decided to prioritise

Individual marks come from your live presentation at 2:45 pm, so make sure everyone on the team speaks and can field a question.

The full brief — the data, the rules Jade operates under, what we're judging, and the questions worth asking yourself — is attached below. Read it properly before you start designing.

Good luck!
